

**I'm using the digital output of the card, and some of the card's Control panel functionalities do not work.**

When using the using the cards in this configuration, some of the features of the card cannot be used:

- **The Speakers test utility.**

This test applies only to speakers connected to the analog output of the card. You will only be able to hear sounds on your front speakers.

You will be required to use the test utility provided by your decoder or speakers system.

- **The Control Panel Equalizer**

The EQ applies only to the analog output of the card

- **Hardware acceleration in games and other applications**

EAX, Direct Sound 3D & A3D are only supported out of the analog connectors.
