

How can I use cue points with the Virtual DJ software?

Cue points are markers you place in an audio file to instantly access a specific point in a track. Hercules DJ Console allows you to set up to 3 cue points.

- To set a cue point: when the audio file is not in playback mode, position a cue point at the exact spot you wish to access. Pressing button 1 sets cue point 1, button 2 sets cue point 2, and button 3 sets cue point 3.
 - The large **CUE** button next to the **Play/Pause** button and the jog wheel is for cue point 1 only.
 - You cannot set a cue point in a file you are currently playing.
- To go to a cue point: when the audio file is in playback mode, press button 1, 2, or 3 to access the song positions you have set for cue points 1, 2 and 3, respectively.
