

Why did Hercules include 183MHz of RAM in the retail version, while NVIDIA® recommended 166MHz?

The Geforce2 MX performance with a 175MHz core can be improved in 32-bit game texturing when the RAM is clocked at least at as fast as the core. As a RAM clock, 183MHz is achieving the highest speed with the Geforce2 MX chipset. The 166MHz RAM recommended by NVIDIA® already fulfills all the expectations and promise of the NVIDIA® chipset. 183MHz is a bonus.
