How can I find and change the name of my computer and the name of my workgroup on a system running Windows 2000?

To verify the computer name as well as the workgroup or domain used, click *"Start/Settings/Control Panel"* and select the *"System"* icon.

In the "System Properties" window, select the "Network Identification" tab.

System Properties	<u>? ×</u>
General Network Identification Hardware User Prof	files Advanced
Windows uses the following information to identify your computer on the network.	
Full computer name: Laptop.Office	
Workgroup: HOME	
To use the Network Identification Wizard to join a domain and create a local user, click Network ID.	Network ID
To rename this computer or join a domain, click Properties.	Properties
OK Car	ncel <u>Apply</u>

Here you will find the *"Full computer name"* and the name of the *"Domain"* or *"Workgroup"* used.

To rename your computer or change the settings for the domain or workgroup used, click the *"Properties"* button.
