How can I manually assign an IP address to my computer on a system running Windows Millennium?

To change the configuration of your IP address, go to your system's *"Control Panel"*. To do so, click *"Start/Settings/Control Panel"*. Double-click the *"Network"* icon.

In the "Network" window, select the "Configuration" tab. Select the "TCP/IP -> Hercules Wireless G" network component and then click "Properties".

The *"TCP/IP -> Hercules Wireless G"* option may appear differently, depending on the Hercules product installed on your system. For a PCI card, the option will appear as *"TCP/IP -> Hercules Wireless G PCI"*, for a PCMCIA card it will appear as *"TCP/IP -> Hercules Wireless G PCI"*, and for a USB key it will appear as *"TCP/IP -> Hercules Wireless G USB2"*.

		0	ĸ	Cancel	

We recommend that you select "192.168.1.x" for your IP address (replace the "x" with a number between 2 and 254) and "255.255.255.0" for your Subnet mask.

In the *"Gateway"* tab, enter *"192.168.1.1"* (the Hercules Modem router's default address) and click *"Add"*.
