I can't access the Muse control panel as presented in the user manual.

Be sure to install your card using the most recent drivers available from our support site.

1- From **Windows Control Panel**, open:

Sound and Audio Devices (Windows XP)
Sounds and Multimedia – (Windows ME / 2000
Multimedia – (Windows 98SE)

Make sure the box for **Show Volume Control on the Taskbar** is checked

2- Press the **Apply**. At this point, you should see a new volume icon appear on the system tray by your clock.

3- Go to your **Start** menu, and select **Run**, then type:

 MIXER.EXE /STARTUP

4- Repeat Step 1, but this time, uncheck the box. Press **APPLY** and close the window.

5- Close all open windows, and reboot your PC.

The **C-Media mixer** icon should now appear by your clock.
