## How can I verify that my DJ Control MP3 is correctly installed on my MAC computer?

Once installed, the DJ Control MP3 should normally be enumerated by System Profiler (**Application / Utilities**):

The DJ Console will also be present in **Audio/MIDI SETUP** (Application > Utilities):

As the DJ Control MP3 doesn't include a soundcard, you will have to rely on your computer soundcard, or any additional soundcard you may have. This can be configured under **Audio Devices**.

Under **MIDI Devices**, you should notice the DJ Control's inputs and outputs
