## How can I verify that my DJ Console MK2 is correctly installed on my PC ?

First, we recommend that you use the latest driver version available from our web site to proceed to the installation.

Once connected and installed, the DJ Console should normally be enumerated under **Device Manager**:

- Right click on **COMPUTER** icon on your desktop and select **Manage**
- From the left column, click on Device Manager

The different elements of the **DJ Console** you should normally appear in the following categories:

- The DJ Console will also be present in Windows Control Panel under Sound:

When connected, the DJ Console should be seen as the default **Sound Playback** and **Sound Recording**. If you wish to use any other soundcard for applications other than DJ (Chat, movies, etc), you can select it from this menu.

You will notice that controls for **Sound Recording**, are not accessible, since changes are required to be made using the **DJ Console Control Panel**, which should appear in the notification area (near the clock). It can also be accessed from Windows **Control Panel**.

The **ABOUT** tab provides information about the drivers currently installed. If you ever need to contact our technical support, be sure to have this information at hand.
