

How can I use Virtual DJ with my laptop's integrated speakers?

The **Hercules DJ Console** and **Console MKII** include a complete sound card and the version of **Virtual DJ** included will only allow the use of the DJ Console sound card. It is necessary to connect speakers directly to the DJ Console outputs.

The laptop speakers are internally hooked to the internal sound card and that cannot be changed. However, the standard version of Virtual DJ does permit the use of multiple sound cards configuration.
