

How can I verify that the DJControl Jogvision is correctly installed on my MAC computer?

Once installed, your DJ controller should normally be enumerated in **System Profiler (Applications > Utilities)**:

It will also be present in **Audio/MIDI SETUP (Applications > Utilities)**:

Under **Window > Show MIDI studio**, you should notice the following icon:

The **DJ Control Panel** icon should also appear on the desktop. It is also accessible from **Applications > DJHERCULESMIX > DJSeries > DJJogV > ControlPanel**.

The **ABOUT** tab provides information about the drivers currently installed. If you ever need to contact our technical support, be sure to have this information at hand.

The screenshot shows the 'ABOUT' tab of the DJControl software interface. At the top, there are four tabs: 'MAIN', 'CONTROLS-AUDIO', 'IN-JOG DISPLAY', and 'ABOUT' (which is highlighted in blue). Below the tabs, a message reads: 'PLEASE HAVE THIS INFORMATION READY WHEN YOU CONTACT OUR TECHNICAL SUPPORT TEAM.' To the left, technical specifications are listed: PACKAGE: v5.41, FIRMWARE: v2.43, MIDI MAP: DEFAULT, SERVER: v12.33, DJ API: v9.5, and Ref: 15-01-01234-012345-5. Below this is the copyright notice: 'COPYRIGHT (C) 2005-2015, GUILLEMOT R&D INC. ALL RIGHTS RESERVED.' On the right side of the screen, there is a 3D rendering of a Hercules DJ controller with two turntables and various buttons.
